

To Our Fellow Shareholders

Thank you for your support over the past months. We've been busy since our last update in May and thought this would be a good time to provide a short summary of things that have happened.

Nanotech 2007 Poster Sessions

We participated in a poster session at the Nanotech 2007 conference in May. Our session, entitled "Growth and Engineering of High Aspect-Ratio AAO Templates Integrated on Silicon Substrates", described how we make our nanowires on silicon. In addition, Kevin Leonard of SolRayo presented a poster entitled, "Synthesis and Characterization of Electrochemical Capacitors Using Nanoporous SiO₂".

Both sessions garnered a lot of interest from many among the estimated 4,000 people who attended.

Our Newest Board Member

We are proud to welcome Cathryn S. Gawne to our Board of Directors. Ms. Gawne is a respected corporate and securities attorney based in San Jose, California. She's been practicing law in these fields for over 25 years.

Her practice focuses primarily on emerging growth companies in a variety of industries, including wireless and portable information technologies, mining, telecommunications, software, automotive and retail. She advises companies on mergers and acquisitions, corporate governance, franchising, SEC compliance, intellectual property and general corporate matters. She also serves on a number of non-profit and advisory boards.

Her clients include Human BioSystems, Vinoble Inc., Semotus Solutions, The Bobby Jones Golf Company and D2M. She serves on the Board of Directors of the Association for Corporate Growth in the Silicon Valley, the Women in Technology International Foundation, the Center for Healthy Development, and other organizations.

She has also represented Enable IPC as its legal counsel since the company's inception. She knows our business plan and is a strong supporter of our efforts. We are happy and honored to have her on board.

Blog

Although they may not seem like much on the surface, corporate blogs are quickly becoming valuable communication tools for companies. Our blog, which can be found at www.enableipc.com/blog, is up and running.

In the future, we anticipate entries by some of our key personnel, including Dr. Mark Daugherty and Timothy Lambirth. We encourage you to visit it once in a while and see what's on the minds of the people here at the company.

Ultracapacitor Technology

Over the past couple of months we have been working to optimize the nanoparticle solution and the coating processes to attain the most coverage on the electrodes and produce the most effective performance results. We have narrowed the procedure down to a very effective set of steps.

In the coming weeks and months we will continue the effort to meet the target specifications, package alpha units and then deliver beta units to prospective users.

Microbattery Technology

In addition to our mostly standardized procedure for creating nanowires, we have been pursuing alternative ideas that should be even less expensive than our current method. These include the use of certain sol gels and other battery chemistries.

We are also continuing to explore methods of combining our nanowires with electrode layers to provide the surface area we are looking for while ensuring enough material to provide the energy needed for our target applications.

Upcoming Events

Annual Meeting of Shareholders

Our Annual Meeting of Shareholders is scheduled for July 26, 2007 at 9:00 am at the Tournament Players Club in Valencia, California, not far from our corporate offices. The actual meeting itself is expected to last only a few minutes, but we will be having a presentation and Q&A session afterwards. Shareholders of record as of June 11, 2007 are invited to attend.

NanoTX '07

Enable IPC will be exhibiting at [NanoTx '07](#) in Dallas, Texas, October 2-4, 2007. NanoTx is one of the largest nanotechnology conferences in the world with a wide range of highly qualified attendees, including educators, scientists, R&D management and business development personnel.

In addition, Kevin Leonard will be presenting a paper on our ultracapacitor technology. We will have more on this event in the coming months.

We encourage you to check out this conference. It is one of the largest and best known nanotech-related events. Among the attendees and participants last year were many major corporations and dignitaries (including the mayor of Dallas, the governor of Texas, Prince Andrew, H. Ross Perot and others).

In Conclusion

Again, thank you for your support. We hope these updates, the blog and press releases (and, of course, our SEC filings) will serve to keep you informed on our progress.

Forward-Looking Statements:

This Corporate Update contains forward-looking statements, such as "believe" and similar terminology, which are made pursuant to the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. These forward-looking statements involve risks and uncertainties which could cause actual results that the Company achieves to differ materially from any of the forward-looking statements. Such risks and uncertainties, include, but are not limited to, the following: the timely development and market acceptance of products and technologies, the ability to secure additional sources of financing, the difficulties in forecasting results from development efforts, difficulties in accurately estimating market growth, the impact of changing economic conditions, business conditions in the microbattery industry and others identified in our Annual Report on Form 10-KSB, as amended, and other Securities and Exchange Commission filings. The company undertakes no obligations to revise or update any forward-looking statements in order to reflect events or circumstances that may arise after the date of this Corporate Update.
